EDUCATION

Helwan University

B.Sc. in Computer Engineering — Grade: Very Good

Cairo, Egypt

Jul 2025

- Relevant Coursework: Data Structures and Algorithms, Parallel and Distributed Systems, AI, DSP
- Head of the Arts Department, Student Union: Founded the first digital arts committees with 100+ students

SKILLS

Programming Languages: Python, C/C++, Java, SQL, SurrealQL

Frameworks: Django, Next.js, Angular, React Native, Redux, SurrealDB, Streamlit, Flutter

Tools & Platforms: Git, Linux, Docker, Kubernetes, MySQL, MongoDB, Firebase

EXPERIENCE

Front-End Engineer

Nov 2025 - Present

Omdena

Remote

- Optimizing existing Next.js and Angular codebases across two projects, improving page-load performance, routing, and bundle size through code-splitting, lazy loading, and smarter client/server-side rendering strategies.
- Redesigning data fetching and caching flows to reduce redundant API calls and stabilize real-time views, centralizing state management and error/loading handling to make the frontend easier to extend and maintain for future contributors.

AI Tutor

Apr 2025 - Oct 2025

xAI - Fixed-time contract

Remote

- Expanded Grok's high-signal corpus and raised tutor UX by creating 40+ reference websites and evaluating 50+ external sites across two web-based projects, then creating a UI/UX reference guide to standardized flows, improve prompt consistency, and accelerate onboarding.
- Executed 4.5K+ tasks across 15+ projects at L0/L1/L2, maintaining top-tier QC with below-average lead time.

Engineering Intern

Jul 2024 - Jan 2025

Procter & Gamble

Cairo, Egypt

- Developed a Python-based data extraction pipeline to streamline material performance simulations, reducing physical testing reliance and saving 1 year per material development cycle.
- Collaborated with cross-functional teams and senior leaders to design a process simulation model, optimizing workflow efficiency and reducing trial time by 30 minutes per iteration.
- Partnered with organizational leaders to conduct a BVOA (Best Value Option Analysis) for industrial AI vision systems, automating 44% of quality checks and achieving 38% scrap savings.

Software Engineer Intern

Aug 2023 - Sept 2023

Information Technology Institute (ITI) [Play Store](#)

Cairo, Egypt

- Led a team of 3 engineers to develop the front end for Benud, a React Native app, integrating asynchronous offline data fetching and server syncing, saving architects 15 hours monthly and reducing launch time by 10%.
- Minimized app size and improved performance by reducing re-renders with FlatList, enhancing load times.
- Implemented deep linking and designed the UX after interviewing 10+ architects, streamlining navigation.

Software Engineer Intern

Jul 2023 - Aug 2023

Vodafone

Cairo, Egypt

- Developed a Django platform with Celery for processing large datasets, implementing batch operations and dynamic forms to streamline data transformations and reduce processing time by 1 hour.
- Designed data pipelines with Pandas and django-import-export to handle 100k+ tuples, enhancing scalability.
- Built a Streamlit app for real-time data analysis, improving workflows and enabling faster decisions.

Software Engineer (Founding)

Oct 2020 - Mar 2023

Gaimiz [Website](#)

Cairo, Egypt

- Led a 15-member team to launch gaming e-commerce platform, generating \$4K+ in revenue by automating workflows and building a scalable platform with Next.js and SurrealDB for deployment cost optimization.
- Boosted conversion rate by 27% through analytics pipelines, real-time feedback systems, and iterative A/B testing, aligned with a strategic plan to improve user acquisition and retention over 3 years.
- Increased user engagement by 40% by integrating a dynamic 3D model responsive to user inputs and optimizing UI/UX for performance and interactivity.

PROJECTS

CamVitals — React, TypeScript, Node.js, Express, PyTorch, Azure, Docker, Kubernetes

[GitHub](#)

- Built a full-stack, multi-tenant wellness platform with React/TypeScript front end and Node.js/Express back end.
- Integrated a real-time rPPG model into the web client, streaming live heart-rate and respiration every minute.
- Achieved sub-20s inference time for 1-minute video captures, with scalable RESTful APIs, Redis caching, and CI/CD via GitHub Actions to support 5,000+ concurrent users.

apply.sucks — React, Docker, Kubernetes, RabbitMQ

[Website](#)

- Built the web app frontend using React, featuring chunked loading, one-click applications, and dynamic popups.
- Managed testing and deployment with CI/CD pipelines using GitHub Actions and Azure DevOps.
- Built a containerized ETL pipeline with Docker and Kubernetes, using RabbitMQ to process 30,000+ job postings.

Veribuy — React Native, Redux, Firebase

[GitHub](#)

- Built a social commerce app for iOS/Android cutting churn rate by 27%.
- Optimized video playback with resolution adjustment and caching for seamless performance across networks.
- Conducted 120+ market research interviews to design the UI/UX, and brand identity, reducing MVP launch time by 25% and earning recognition among the top 10% of applicants for Y-Combinator's S22 & W22 batches.
